TOTAL STENT AND GUIDEWIRE LOSS
(off guidewire)

1. Pass a coronary guidewire distally to secure the vessel
2. Try to use a snare to retrieve the lost stent (use of bioptome/forceps, successful in some reported cases)
   - If retrieval successful
   - If failed
   - Crush the stent to the vessel wall with another stent (last option in left main case)
   - Check the stent and balloon integrity after retrieval
