

Switching between P2Y12 blockers: How ? – PCR Algorithm

Acute Phase < 1 month

As Early as possible for escalation

Others Switches with 24h between drugs

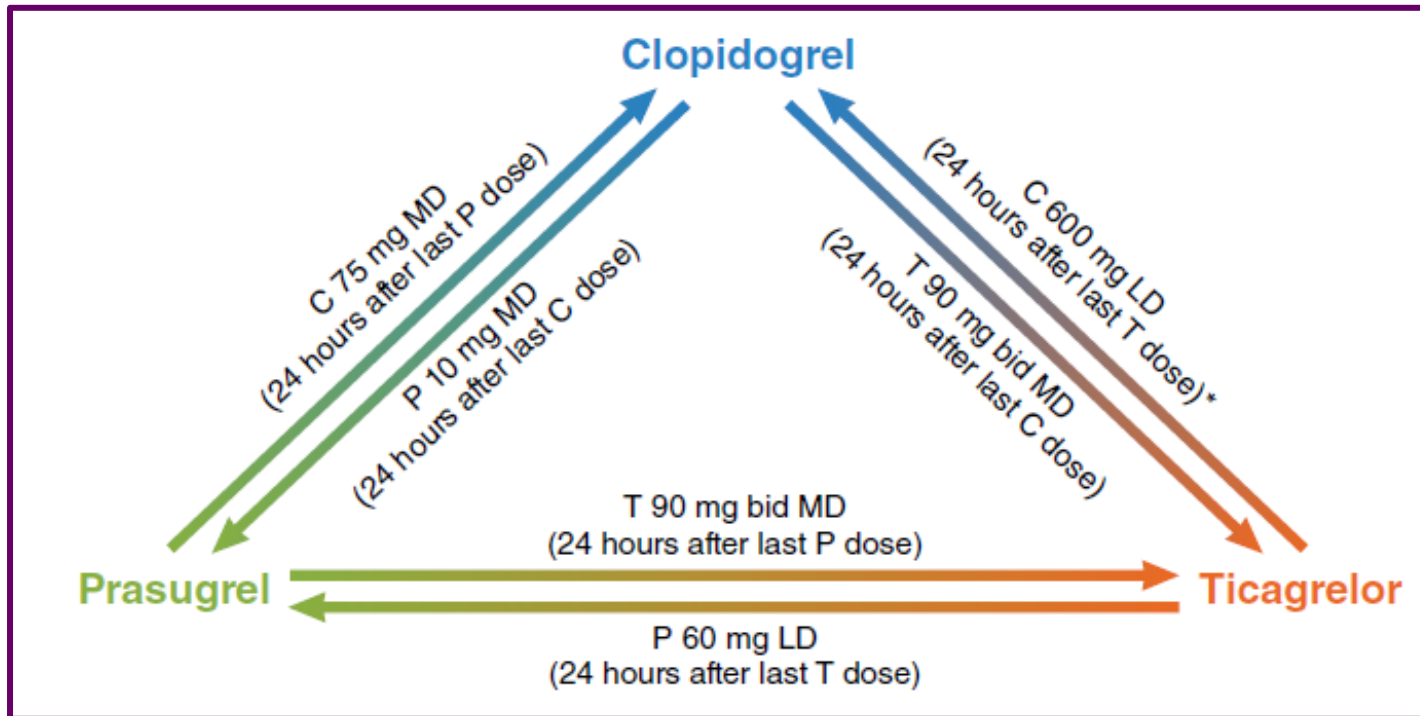

Always switch with LD

Chronic Phase > 1 month

Switch with 24h between drugs

LD only if switch from Ticagrelor

*Consider de-escalation with clopidogrel 75-mg MD (24 hours after last prasugrel or ticagrelor dose) in patients with major bleeding concerns

The PCR clinical algorithm is endorsed by each expert and build in co-operation with the audience. This does not represent a guideline or the view of any scientific society.
